

Name: A M M Parvez
Mobile: +817084642670
E-mail: ammparvez@gmail.com
Nationality: Bangladeshi
Marital Status: Married
LinkedIn: www.linkedin.com/in/ammparvez
Birth Date: 19/07/1993
Current Address: Nagoya, Aichi, Japan

Professional Summary:

Software Engineer with 5+ years of experience in Japan. Specialized in Python and have experience from design to deployment of a software. Adept at integrating AI-driven features, including LLM-based automation and predictive ML algorithms. Proficient at transforming manual business processes into automated, data-centric workflows. Currently seeking an AI Developer/Engineer position to design and implement intelligent solutions. Ready to relocate on short notice.

Technical Skills:

AI & ML: LLM API Integration, RL, Vector Databases, RAG, PyTorch, TensorFlow, Scikit-learn, OCR.
Backend & Mobile: Python (Django, DRF, FastAPI), Node.js, Java, Google App Script, Flutter (Cross-platform).
Frontend: Vue.js, React.js, JavaScript (ES6+).
Data & Infrastructure: PostgreSQL, MongoDB, SQLite, Redis, Celery, Daphne, Docker, Nginx.
Cloud: AWS, GCP, Linode
Cybersecurity & Tools: Kali Linux, CentOS, Nmap, Burp Suite, OWASP ZAP.

Professional Certification

- AWS Certified Developer - Associate
- Fundamental Information Technology Engineer Examination (FE, 基本情報技術者試験)

Employment Experience:

Yokoyama System Management Research Co., Ltd. Nagoya, Japan	
Software Engineer(Python/AI)	6/2025-Present
• Developing a price prediction model by using an MLLM to extract data from manufacturing diagrams, followed by training an XGBoost algorithm. Actively engaged in every stage, from feature engineering to model deployment. • Architected a similar-diagram search system for manufacturing drawings using Image and Text Embeddings, and Vector databases. • Engineered a similar-item search engine utilizing text embeddings and vector databases, integrating Reinforcement Learning to optimize search relevance based on user feedback. • Streamlined the retrieval of historical purchasing data and technical specifications for comparable items, the system significantly accelerated the quotation workflow and enhanced data accessibility. • Developed a robust price-simulation engine for manufacturing BOMs, enabling users to instantly identify optimal pricing based on variables such as volume and lead time. • Implemented advanced tree-traversal techniques to process complex nested structures, ensuring seamless performance when simulating costs across extensive, multi-level bills of materials. • Developed an end-to-end invoice/receipt extraction system. Leveraged OCR and data processing to automate accounting entries, delivering both Web and Mobile (cross-platform) versions.	

- Built a comprehensive LLM-powered email management system. Features include automated context-aware replies, priority scoring, and summarization; integrated via custom Gmail Add-ons and Outlook Add-ins.

Technologies: Python, FastAPI, PyTorch, Scikit-learn, LLM API, Reinforcement Learning, Vector DBs, OCR, RAG, JavaScript, Node.js, Vue.js, React.js, Google App Script, MongoDB, SQLite, etc.

Kishida Electric Co., Ltd. | Nobeoka, Miyazaki, Japan
Software Engineer(Python/Fullstack)

4/2021 - 5/2025

- Engineered and deployed a centralized management platform for electrical construction projects, overseeing daily reporting, inventory (stock), and vehicle tracking. Collaborated with other employees to design and implement the application, prioritizing user experience and seamless workflows.
- Developed multiple mobile applications for reporting, including real-time reporting tools and specialized educational platforms for the Japanese Second-class Electrician certification.

Technologies: Python, Django, DRF, JavaScript, PostgreSQL, Redis, Celery, Daphne, Nginx, Flutter, SQLite.

Cloudly Solutions | Dhaka, Bangladesh
Cyber Security Engineer

5/2018 – 3/2019

- Prepared Proof-of-Concept (POC) prototypes for reconnaissance and monitoring software, focusing on automated threat detection and system oversight.
- Developed workflows to collect and analyze Open-Source Intelligence (OSINT), transforming large-scale unstructured data into actionable insights for targeted monitoring.
- Conducted comprehensive Vulnerability Assessments and Penetration Testing (VA/PT) to ensure the security and integrity of internal software assets.

Technologies: Kali Linux, CentOS, Python, Java, Nmap, BurpSuite, OWASP-ZAP, etc.

Academic Background

Master's in Information Technology

University of Dhaka | Dhaka, Bangladesh

Graduation Year: 03/2019

B. Sc Engineering in Applied Physics, Electronics and Communication Engineering

University of Chittagong | Chittagong, Bangladesh

Graduation Year: 12/2016

Courses & Specializations

- Advanced Machine Learning on Google Cloud Specialization By Google Cloud
- Machine Learning on Google Cloud Specialization By Google Cloud
- Natural Language Processing Specialization By DeepLearning.AI
- Computational Social Science Specialization By UCDAVIS
- DeepLearning.AI TensorFlow Developer Professional Certificate
- Mathematics for Machine Learning and Data Science Specialization By DeepLearning.AI

Languages

Bengali: Native

English: Professional Working Proficiency (TOEFL iBT: 100)

Japanese: Professional Working Proficiency (JLPT N2 Certified)

Arabic: Beginner / Currently Learning
